**Subject: Invitation to a Regional Training Course on Hybrid Imaging: SPECT/CT and PET/CT, Belgrade, Serbia, 18 - 22 May 2015**

Dear National Liaison Officer,

I am pleased to invite you to send nominations of suitable candidates to participate in the above-mentioned training course under the framework of TC Project RER/6/026 – Strengthening Single Photon Emission Computed Tomography/Computed Tomography (SPECT/CT) and Positron Emission Tomography (PET)/CT Hybrid Imaging Applications for Chronic Disease Diagnosis. The purpose of the training course and related information are outlined in the attached Prospectus.

For candidates who are selected by the IAEA, the Agency will cover the cost of return international travel from the home country to Belgrade, Serbia and provide a stipend for the duration of the training course in line with Agency rules and procedures.

Please submit nominations to the IAEA online through the Technical Cooperation Department's InTouch system (<http://intouch.iaea.org>). Only if this is not possible, nominations may be submitted on the Nomination Form for Training Courses available on the IAEA website: <http://www.iaea.org/technicalcooperation/How-to-take-part/train-course/index.html>. Completed forms should be endorsed by relevant national authorities and sent to the Programme Management Officer for this project, Ms Mayumi Yamamoto (IAEA Official Fax: +43-1-26007 or E-Mail [Official.Mail@iaea.org](mailto:Official.Mail@iaea.org)), through the official channels, i.e. the designated National Liaison Office for IAEA matters, not later than 6 March 2014.

Yours sincerely,

Manase Peter Salema  
Director  
Division for Europe  
Department of Technical Cooperation

Enclosures: Prospectus

# International Atomic Energy Agency

## Regional Training Course on Hybrid Imaging: SPECT/CT and PET/CT

### PROSPECTUS

<b>Project Number &amp; Title:</b>	RER/6/026 Strengthening Single Photon Emission Computed Tomography/Computed Tomography (SPECT/CT) and Positron Emission Tomography (PET)/CT Hybrid Imaging Applications for Chronic Disease Diagnosis.
<b>Place(City, Country):</b>	Belgrade, Serbia
<b>Dates:</b>	18-22, May 2015
<b>Deadline for Nominations:</b>	6 March 2015
<b>Organizers:</b>	The International Atomic Energy Agency (IAEA) in cooperation with the Government of Serbia and the Clinical Center of Serbia.
<b>Host Country Organizer:</b>	Ms. Dragana Sobic-Saranovic Institute of Nuclear Medicine Clinical Center of Serbia Visegradska 26 11000 Belgrade Serbia Tel: 00381113663289 Fax: 00381113615641 E-mail: dsobic2@gmail.com
<b>Language:</b>	English
<b>Purpose:</b>	The training course will provide theoretical and practical training in state of the art of hybrid imaging using SPECT/CT and PET/CT technology, and sentinel lymph node detection/biopsy.
<b>Expected Output(s):</b>	Participants trained, level of knowledge upgraded. Training material in the form of DVDs will be provided at the end of the course
<b>Scope and Nature:</b>	Chronic diseases like cardiovascular diseases and cancer account for more than 40% of causes of death worldwide (source: WHO World Health Report 2007). Nuclear medicine/molecular imaging has a strong role to play as Molecular imaging is emerging as a new approach for the non-invasive detection of molecular and cellular processes that can identify disease before the manifestation of gross anatomic features or physiologic consequences. Application of molecular imaging for early detection of the initiating events

associated with disease will be critical for improved understanding of the underlying mechanisms of disease, primary prevention of disease, risk stratification of patients with disease, and promotion of individualized medical treatment based on the unique characteristics of a disease in any given patient. SPECT/CT and PET/CT are new imaging technologies which couple the metabolic information provided by SPECT and PET with the exquisite anatomical resolution of X-ray CT. Both procedures have already found a number of clinical applications in oncologic imaging, particularly PET/CT, and in cardiac disease management. Widespread introduction into clinical practice started approximately 10 years ago and is increasing steadily. It can already be stated that the synthesis of structural and metabolic information improves the accuracy of primary staging and the detection of recurrent disease and has the realistic potential to change patient management in 10 to 20% of cases. PET/CT fusion images can directly guide biopsies or surgical interventions.

**Background Information:** For both PET/CT and SPECT/CT, precise anatomical correlation with CT, improves diagnostic accuracy and reduces scan times. Both techniques have demonstrated added value.

The course will include lectures to familiarize with clinical applications, imaging acquisition and processing. The course will be organized in a teaching hall with frontal lectures during the mornings followed by interactive discussions on real challenging clinical cases in the afternoons.

**Participation:** The training course is opened to up to 25 participants from countries that participate in the RER/6/026 project and need assistance in training staff for hybrid imaging methodology.

The target countries are: Albania, Azerbaijan, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Estonia, Georgia, Greece, Hungary, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Poland, Malta, Montenegro, Republic of Moldova, Romania, Russian Federation, Serbia, Slovakia, Slovenia, Tajikistan, The former Yugoslav Republic of Macedonia, Ukraine and Uzbekistan.

**Participants' Qualification:** The nominees should be qualified Nuclear Medicine physicians. Candidates should be working currently in nuclear medicine departments, with strong commitment to provide hybrid imaging services.

Nominations of oncologists who wish to have exposure to nuclear medicine applications with a view of implementing in their practices are also acceptable.

**Nomination Procedure:** Nominations should be submitted to the IAEA online through the Technical Cooperation Department's InTouch system (<http://intouch.iaea.org>). Should this not be possible, nominations may be submitted on the standard IAEA Nomination Form for Training Courses (available from the IAEA website: <http://www.iaea.org/>). Completed forms should be endorsed by the relevant national authorities and returned to the Agency through the normal official

channels, i.e. the designated National Liaison Office for IAEA matters.

In addition, a 5 to 10 slides PowerPoint presentation of an interesting case (in PDF format) preferably on hybrid imaging -and if not possible on general Nuclear Medicine- should be forwarded online in the same way as the nomination. It should include the name of the author and the institution. Please, ensure that there is no name of the patient/s in the slides or in the images. Failure to provide the case PowerPoint presentation will automatically disqualify the application.

The completed nomination forms should be sent to the Programme Management Officer for this project, Ms Mayumi Yamamoto, through IAEA Official Fax (+43-1-26007) or E-Mail (Official.Mail@iaea.org), not later than 6 March 2015. Nominations received after this date or which have not been routed through the established official channels cannot be considered.

**Administrative  
and Financial  
Arrangements:**

Nominating Governments will be informed in due course of the names of the candidates who have been selected and will, at that time, be given full details of the procedures to be followed with regard to administrative and financial matters.

Selected participants from countries eligible to receive technical assistance will be provided with a round trip economy class air ticket from their home countries to Belgrade (Serbia), and a stipend sufficient to cover the cost of their accommodation, food and minor incidentals. Shipment of accumulated training course materials to the participants' home countries is not the responsibility of the IAEA.

The organizers of the training course do not accept liability for the payment of any cost or compensation that may arise from damage to or loss of personal property, or from illness, injury, disability or death of a participant while he/she is travelling to and from or attending the course, and it is clearly understood that each Government, in nominating participants, undertakes responsibility for such coverage. Governments would be well advised to take out insurance against these risks.
