HIGA'S 2019 OVERVIEW REPORT ON ACCIDENTAL OR UNINTENDED MEDICAL EXPOSURES TO IONISING RADIATION

In 2019, we received 68 notifications
But some notifications from some relatively high-dose services from Interventional Radiology and Oncology.

Patient safety culture
To prevent errors, you need to implement robust and efficient measures. These include, at a local level, resilient systems and processes as a whole, human error being only one part of a system.

Why should I report near-misses locally?

- To be compliant
- To improve patient safety
- To minimise the probability of preventable events

Diagnostic Imaging
In 2019, the majority of the notifications came from CT and related to the incorrect service user being imaged.

The key findings were to have strong medical identification systems in place to correctly establish the right patient at all stages of the patient journey for X-ray.

Radiotherapy
HIGA received 15 notifications from radiotherapy services in 2019. Overall, there was a positive culture of reporting across radiation oncology services.

REZULTAT

Regulatorni zahtevi u vezi slučajnog i nenamernog izlaganja su dati u obliku **nacrta pravilnika**.

Izrađeno je **Uputstvo za slučajno i nenamerno izlaganje i sigurnosnu kulturu**.

Gore navedeni rezultati usklađuju srpsko zakonodavstvo sa članovima 63 i 96 **Direktive Saveta 2013/59/Euratom**.

ZAKLJUČCI & PREPORUKE

Novi regulatorni zahtevi za lica sa odobrenjem za obavljanje delatnosti da prijavljuju incidente SRBATOM-u i formalno istražuju i beleže značajne događaje koji uključuju slučajno i nenamerno izlaganje poboljšaće sigurnosnu kulturu u radiološkim zdravstvenim sredinama.

Preporučuje se primena smernica iz pravilnika i uputstva prilikom izrade novih podzakonskih akata.
